

Improving the Cyber Fitness and Security of your Organisation

For CEOs, Board Members, Executives & Senior Management

Hosted by eResources Business Systems, the Cybersafe 23 symposium is for leadership and executive teams of organisations that are working to protect their businesses from cyber-attack.

Many organisations are recognising the need to understand the concepts around cybersecurity. Managing cyber risk is different as the threat is relentless and so many of an organisations opportunities are reliant on the use of technology.

In 2022 there were 76,000 reported cybercrime attacks, which equates to an incident every seven minutes in Australia, according to the Australian Cyber Security Centre.

The CyberSafe23 Symposium will assess the five steps to secure your organisation:

- ◆ Identify potential threats and vulnerabilities
- ◆ Assess the organisation's current security measures
- ◆ Develop a plan to mitigate identified risks
- ◆ Implement the plan and monitor its effectiveness
- ◆ Regularly review and update the plan

Free CyberSafe23 Symposium

Presenters:

Graeme Pye

Dr. Graeme Pye received his PhD in information systems security analysis and modelling in 2009 and his research is widely published and focuses primarily on the area of cyber security. Graeme is currently investigating the cyber security risk aspects of SMEs within the Australian business context. In particular, focusing on their resilience and the human relationships, including cyber security preparedness, engagement, confidence, culture, awareness, and training.

Additionally, he has published research in the area of tertiary student engagement with blended learning environments (online and campus-based) and the delivery and interaction of teaching and learning activities. Other research areas of research interest and publication include ICT Ethics, Privacy and Governance of secure information systems.

Helen Boyd

Helen has extensive experience and first-hand knowledge of cybersecurity attacks while working as the South West Credit Branch Manager. Helen understanding is based on the revealing information and insights in dealing with the consequences of being hacked and the emotional effects on victims.

Robert Lane

Widely recognised for his experience in strategy, risk and operational management within governance frameworks, Robert applies this as an advisor to various boards, utilising his experience as Board chair and risk committee chairman of a local financial institution in addition to not for profit, private and ASX listed companies.

Robert brings domestic and international experience in financial management and information technology systems and a sound regional perspective in senior management, finance and human resource management. Robert is a recipient of the CPA Victorian Management Accountant of Year Award, and a former Lecturer at Deakin University (Finance and Economics).

Gavan Cooper

Gavan Cooper is a Director of Cooper Hardiman, a local firm that provides specialist and tailored HR advice and workplace training to businesses and organisations of all sizes. Gavan is a former employment lawyer, trained mediator and workplace investigator, with technical expertise in interpreting and applying industrial instruments and relevant legislation. Gavan also has expertise in conflict resolution and is particularly passionate about working with managers to improve workplace culture, team dynamics and their people management skills.

John Ward

John Ward, a highly valued IT Manager at WDEA Works, brings a wealth of experience in implementing cybersecurity measures. With over a decade in information security, he excels in developing effective data security policies for businesses of all sizes. John's expertise extends to assisting small companies in achieving data protection compliance across diverse industries. As a leader, John fosters a collaborative environment within his diverse team. His extensive knowledge of the latest technologies and industry best practices makes him a reliable and dedicated IT Manager, ensuring the security of organisations' valuable information assets.

Join these five presenters for an informative, engaging and dynamic symposium that provides examples and strategies to deal with the ongoing cyber threat landscape.
